Trips

- Title
- Chatroom
  - User has their own version of Chatroom
  - Add photo, text
  - Removing a message deletes the message entirely.
- Cover Photo
- Location

Users

- List Users

User

Add Trip

- Add friends from friends list
- Add Trip details

Remove Trip

- If you are the creator, remove the trip entirely, and remove it from all the other users.
- If you are a user who is not the creator, removing a trip should remove you from the trip only, but should retain everything else, including all of your previous messages.

Login and Signup Feature:

- The app should enable users to signup and login using a username/password. Use Google authentication in Firebase.

Profile Feature:

- Each user profile should contain the user first name, last name, gender, and profile avatar or photo.
- The user should be able to edit and update all their profile contents including the picture/avatar.
- Each user should be able to use the following features:
  - Discover people who are already registered.

Trips feature:

- Each user should be able to create trips. Each trip profile should contain the title, location (place lat-long coordinates), trip cover photo and a Chat Room to discuss that trip.
- Each user should be able to view trips created by the other users and join in those trips.
- Each trip should be provided with a chat room. Users can only see or post after they join in the trip.
- The messages should be able to contain texts and photos.
- Each user should have their version of the Chat room. They can delete the messages they created from the chatroom. If a message is remove, it should also remove it from all other screens.

- The Chatroom UI should easily and clearly distinguish between sent and received messages. Also, from the UI, the user should be able to identify who is the sender and the time it was sent.
